

Drinking water

Save water – it's easy!

March 2011

■ Dripping taps...our contribution

A dripping tap wastes more than 2000 litres of water per year. Alert the hall manager to faulty taps using a damage form. He/she will repair the damages as quickly as possible.

■ Faulty cisterns...our contribution

Water is wasted through faulty seals in cisterns. The hall manager inspects the cisterns in your accommodation and, where necessary, will replace them.

■ Flushing toilets

Toilets make up a third of the water used daily. With the economy button (press twice), you can save up to 40%!

■ Brushing teeth

Do not leave the water running – use a beaker instead.

■ Showering

Turn the water off when lathering.

■ Washing up

Do not wash large amounts under running water. Fill the sink.

■ Washing clothes

Where possible, only wash with a full machine.
